I was on the call. The people who called in are the scientists evaluating and studying, for the most part. I gave a quick summation of what the ASPECT found. The ASPECT report is on the LDNR webpage and I was told it was on the LDEQ's but I can't find the link. But as you can see, the link on the LDNR webpage, its a joint release:

[Office of Conservation, DEQ Announce Results of EPA Aerial Survey of Bayou Corne Area](#)

While there was somebody on the call from Texas Brine, he couldn't report on the progress of the drilling.

There was discussion of the new bubbles. While unverified, there were new bubbles in Bayou Corne, Grand Bayou and Trish(sp?) Canal. The Trish Canal is near Crawfish Stew Lane in a residential or at least a populated area. That was of concern.

The Uni of Memphis did detect tremors, on 6:47 pm and one at midnight.

There was still a lot of debate about what to do.
